Cybersecurity Management Training

1 – Day Interactive Instructor-led Training

DESCRIPTION

The **Cybersecurity Management Training** program is designed to equip participants with the leadership and management skills necessary to effectively oversee cybersecurity within their organizations. The course focuses on aligning information security strategies with business objectives, regulatory compliance and operational excellence. It covers key areas including cybersecurity governance, risk management, strategic decision-making, incident response, and fostering a security-aware organizational culture.

Participants gain practical knowledge of industry standards and utilize frameworks and models to manage cybersecurity programs that ensure trust, security and stability. The training prepares managers to lead security initiatives, manage cyber risks and respond proactively to emerging threats, enhancing their ability to protect their organization's assets and maintain business continuity.

Participants acquire knowledge in areas such as:

- Maintaining system security and defending against attacks.
- Analyzing network traffic and conducting forensic investigations after breaches.
- Performing audits and securing evidence.
- Managing risk, investments and crises in cybersecurity.
- Implementing policies and programs compliant with ISO, NIST standards and EU regulations including the NIS2 Directive.
- Increasing awareness of new threats, including those related to AI and social engineering.

TARGET GROUP

The Cybersecurity Management Training program is directed at management level staff across various company departments who require broad practical cybersecurity knowledge, decision-making skills in crisis situations and familiarity with legal requirements.

It is designed for individuals who face unique cybersecurity challenges such as targeted social engineering and executive phishing attacks. It meets the group's needs for a framework for effective risk assessment, management and guidance on establishing cybersecurity policies.

Job roles that can take up The Cybersecurity Management Training course include, but are not limited to:

- ✓ Executives (CEOs, CFOs, COOs) who are responsible for making high-level strategic decisions related to cybersecurity.

- ✓ Management staff across various departments who lead teams and are responsible for enforcing cybersecurity policies and cultivating awareness.
- ✓ Board members who oversee governance and compliance with cybersecurity regulations.
- ✓ Risk management staff who analyze and mitigate cyber risks within the organization.
- ✓ Compliance officers ensuring the organization meets legal and regulatory cybersecurity requirements.
- ✓ IT managers and cybersecurity leaders are responsible for the operational defense, incident response and technical security measures.
- ✓ Security professionals and specialists who support and implement cybersecurity frameworks and controls.

TRAINING PROGRAM
